

Q.what is artificial intelligence?

Artificial intelligence (AI) refers to the simulation of human intelligence in machines that are programmed to think and act like humans. These intelligent machines can be trained to perform a variety of tasks, such as recognizing patterns, learning from experience, making decisions, and adapting to new situations.

Q.what is machine learning?

Machine learning is a type of artificial intelligence that allows software applications to become more accurate in predicting outcomes without being explicitly programmed. The basic idea behind machine learning is to build algorithms that can receive input data and use statistical analysis to predict an output value within an acceptable range.

Q.what is a search engine?

A search engine is a program that searches the Internet and returns a list of websites that are most relevant according to the keywords in your query.
